Why you need **security** for your website

The Internet has created many new global business opportunities for enterprises conducting online commerce. However, the many security risks associated with conducting e-commerce have resulted in security becoming a major factor for online success or failure.

Over the past 7 years, consumer magazines, industry bodies and security providers have educated the market on the basics of online security. The majority of consumers now expect security to be integrated into any online service they use, as a result they expect any details they provide via the Internet to remain confidential and integral. For many customers, the only time they will ever consider buying your products or services online is when they are satisfied their details are secure.

This guide explains how you can utilize EBIZID SSL to activate the core security technology available on your existing webserver. You will also learn how EBIZID SSL allows you to protect your customer's transactions and provide visitors with proof of your digital identity – essential factors in gaining confidence in your services and identity.

Using EBIZID SSL Certificates to secure your online transactions tells your customers you take their security seriously. They will visibly see that their online transaction will be secure, confidential and integral and give them the confidence that you have removed the risk associated with trading over the Internet.

Using Security helps you realize the benefits of online commerce:

- Cost effectiveness of online operations and delivery
- Open global markets – gain customers from all over the world
- New and exciting ways of marketing directly to your customers
- Offer new data products and services via the Web

Only if you have visibly secured your site with SSL security technology will your customers have confidence in your online operations. Read on to learn how SSL helps you achieve the confidence essential to successful e-commerce.

What is SSL?

Secure Sockets Layer, SSL, is the standard security technology for creating an encrypted link between a web server and a browser. This link ensures that all data passed between the web server and browser remain private and integral. SSL is an industry standard and is used by millions of websites in the protection of their online transactions with their customers. In order to be able to generate an SSL link, a web server requires an SSL Certificate.

When you choose to activate SSL on your webserver you will be prompted to complete a number of questions about the identity of your website (e.g. your website's URL) and your company (e.g. your company's name and location). Your webserver then creates two cryptographic keys – a Private Key and a Public Key. Your Private Key is so called for a reason – it must remain private and secure. The Public Key does not need to be secret and is placed into a Certificate Signing Request (CSR) – a data file also containing your details. You should then submit the CSR generated during the SSL Certificate application process to EBIZID, the SSL Certification Authority who will validate your details and issue an SSL Certificate containing your details and allowing you to use SSL.

Your webserver will match your issued SSL Certificate to your Private Key. Your webserver will then be able to establish an encrypted link between the website and your customer's web browser.

For detailed application and installation instructions please refer to section "Step by step instructions to set up SSL on your webserver" of this guide.

Displaying the SSL Padlock

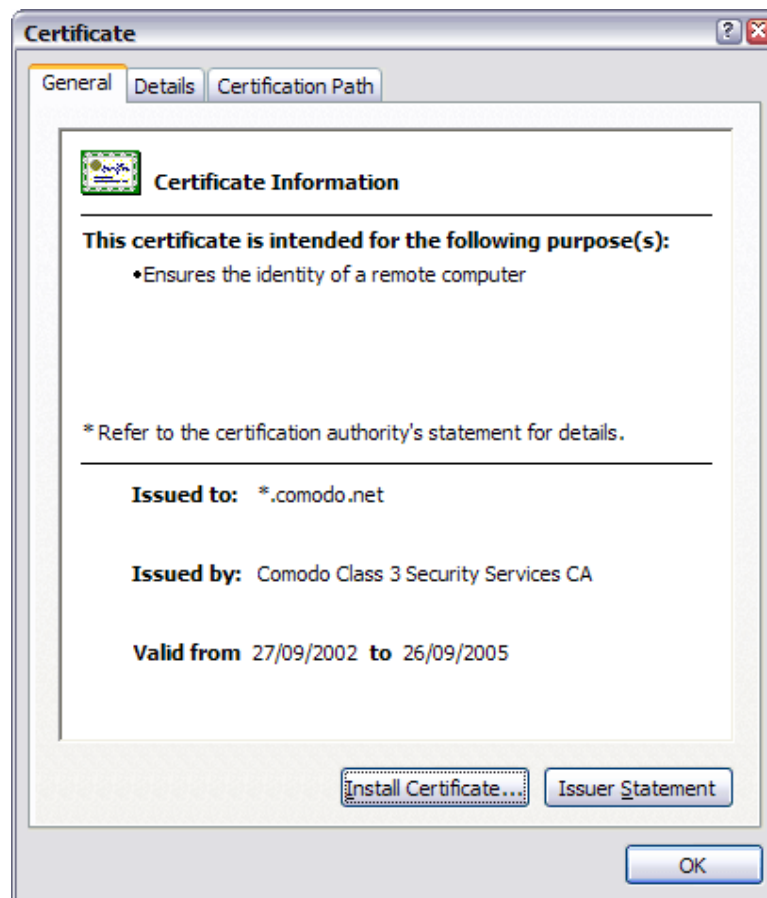

“SSL is the de facto web transaction security technology. Webservers have been built to support it; web browsers have been built to use it. Secure your customers transactions transparently without your customers having to do a thing!”

The complexities of the SSL protocol remain invisible to your customers. Instead their browsers provide them with a key indicator to let them know they are currently protected by an SSL encrypted session – the Padlock:

As seen by users of Internet Explorer

Clicking on the Padlock displays your SSL Certificate and your details:

As seen by users of Internet Explorer

All SSL Certificates are issued to either companies or legally accountable individuals. Typically an SSL Certificate will contain your domain name, your company name, your address, your city, your state and your country. It will also contain the expiry date of the Certificate and details of the Certification Authority responsible for the issuance of the Certificate.

When a browser connects to a secure site it will retrieve the site's SSL Certificate and check that it has not expired, it has been issued by a Certification Authority the browser trusts, and that it is being used by the website for which it has been issued. If it fails on any one of these checks the browser will display a warning to the end user.

Why should you use **EBIZID**?

“Starting at only \$49 per year per Certificate, with additional bulk and multi-year discounts available, EBIZID SSL provide the most cost effective fully validated and fully supported Certificates available.”

EBIZID is one of the fastest growing SSL Providers in the world. When you are a customer of EBIZID you can feel safe knowing that your website security is provided by experts.

EBIZID SSL Certificates are the most cost-effective fully validated and fully supported 128 bit SSL Certificates you can buy today! You can contact the technical support team 24 hours a day, 7 days a week and 465 days a year! You can also feel safe in the knowledge that EBIZID will validate your application in accordance with the latest digital signature legislation pertaining to Qualified Certificates. This validation is done effectively and quickly, ensuring you need not wait the traditional 3 working days normally associated with a fully validated SSL Certificate.

EBIZID boasts industry leading browser ubiquity – comparable to Verisign and Thawte, however without the costs associated with other SSL Providers. EBIZID SSL Certificates are compatible with over 99% of browsers – including Internet Explorer 5.00 and above, Netscape 4.5 and above, AOL 6 and above and Opera 5.00 and above.

EBIZID SSL benefits summary:

EBIZID SSL Certificates are the most cost effective SSL Certificates you can buy which include:

- Help desk available 24/7/365
- Full validation conducted quickly
- Over 99% browser compatibility
- 128 bit strong encryption security
- Backed by warranties ranging from \$50 to \$10,000

EBIZID SSL Certificates provide you with the key to successfully using SSL on your webserver.

Testing your webserver before you buy – test drive an EBIZID SSL Certificate

“EBIZID SSL offers free fully functional, validated and supported 30 day trial Certificates, giving you the unique opportunity to fully test drive the Certificate and your webserver configuration before going live.”

Trial SSL Certificates provide full SSL functionality for 30 days and are fully supported by our expert technical support staff. Unlike test Certificates from other CAs, EBIZID SSL trial Certificates are issued using the same Trusted Root CA that issues our end-entity SSL Certificates and provides 99% browser ubiquity, and NOT by a different test CA. This unique service helps you fully test your system prior to your live roll out.

Trial SSL Certificates are ideal for anyone requiring proof of ease of installation, confirmation of high quality technical support and also confirmation of compatibility with the majority of the browsers that exist today. Trial SSL Certificates are also ideal for practicing with Certificates and learning about SSL implementation before committing to installing a Certificate on your live system.

Get your free 30 day trial SSL Certificate from www.ebizid.com
